FUNCTION: NUCLEOLIN IS THE MAJOR NUCLEOLAR PROTEIN OF GROWING FUNCATION: NUCLEOLIN IS THE MAJOR NUCLEOLAR PROTECING OF GROWING EUKARYOTIC CELLS. IT IS FOUND ASSOCIATED WITH INTRANUCLEOLAR CHROMATIN AND PREDISONAL PARTICLES. IT INDUCES CHROMATIN DECONDENSATION BY BINDING TO HISTONE H1. IT IS THOUGHT TO PLA ROLE IN PRET-FRAN TRANSCRIPTION AND RIBOSOME ASSEMBLY. SUBCELLULAR LOCATION: Nuclear; nucleolar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ween the Swiss Institute of Bioinformatics and the EMBL OULSU European Bioinformatics Institute.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HUMAN
                                                                                                                                                                                                                                                                                  Deo R.C., Sonenberg N., Burley S.K.;

"X-ray structure of the human hyperplastic discs protein: an ortholog of the C-terminal domain of poly(A) binding protein.";

Proc. Natl. Acad. Sci. U.S.A. 98:4414-4419(2001).

-i- FUNCTION: E3 ubiquitin-protein ligase which accepts ubiquitin from an E2 ubiquitin-conjugating enzyme in the form of a thioester and then directly transfers the ubiquitin to targeted substrates (By similarity). This protein may be involved in maturation and/or post-transcriptional regulation of mRNA. May play a role in control of cell cycle progression. May have tumor suppressor function. Regulates DNA topoisomerase II binding protein (TopBP1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          OF CYS-2768.

                                                          SUBUNIT: ASSOCIATED WITH ORC2L.

SUBCELLULAR LOCATION: Cytoplasmic and nuclear.

SUBCELLULAR LOCATION: Cytoplasmic and nuclear.

TISSUE SPECIFICITY: WIDELY EXPRESSED, HIGHEST LEVELS ARE FOUND ADDITION TESTIS AND TYHMUS AND IN FETAL LIVER.

ADULT TESTIS AND TYHMUS AND IN FETAL LIVER.

BUT DEVELOPMENTAL STAGE: TRANSCRIPT PEAKS AT G1-S TRANSITION, BUT TOTAL PROTEIN REMAINS CONSTANT THROGGROUT THE CELL CYCLE.

EXPRESSED IN MULTIPLE TISSUES DURING EMBRYOGENESIS, INCLUDING
                                  NEURAL CREST-DERIVED STRUCTURES.
SIMILARITY: BELONGS TO THE CDC45 FAMILY.

-!- FUNCTION: BINDS DNA AS A HETERODIMER WITH MAX AND REPRESSES
TRANSCRIPTION. BINDS TO THE CANONICAL E BOX SEQUENCE
5'-CACGTG-3' AND, WITH HIGHER AFFINITY, TO 5'-CACGCG-3'.
-!- SUBUNIT: EFFICIENT DNA BINDING REQUIRES DIMERIZATION WITH ANOTHER
BHLH PROTEIN. BINDS DNA AS AN HOMODIMER OR A HETERODIMER WITH MAX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       InterPro; IPR003874; CDC45_like.

                                                  DEVELOPMENTAL STAGE: Widely and highly expressed during the first 3 days of embryogenesis. Prominent sites of expression are the eyes and optic tectum on day 1, the fin buds, liver primordium, and gut on day 2, and the branchial arches on day 3. MISCELLANEOUS: PES mutant embryos exhibit smaller eyes, a reduced brain and visceral skeleton, shortened fins and a lack of expansion of liver and gut, and die on day 6 of development. SIMILARITY: CONTAINS 1 BRCT DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Y13443; CAA73851.1;
